

Polycom PathNavigator™

Features and Benefits

Features

Benefits

Polycom OneDial™

- Make a video call by simply selecting a name from a directory
- The caller does not need to know prefixes, area or country codes for gateway calls
- Internal enterprise dialing can be set up as only 4 digits
- Create conferences without prior scheduling or needing specific multipoint endpoints

Least-Cost Routing

- Finds and selects lowest cost resources automatically
- Finds users regardless of location
- Resources utilized according to bandwidth availability and user policy

Alternate Routing

- Provides a higher level of call success by automatically using ISDN where IP bandwidth is not available

Call Forwarding

- Avoids wasteful unanswered calls, saves time by leaving voicemail or forwarding to attendant or a cell phone

Hunt Group

- Provides a video call center functionality
- Has flexibility to join and leave a group for dynamic resource usage using the endpoint interface

Policy-Based Management

- Bandwidth management on each LAN and WAN connection ensures better call completion success
- Max bit rate per call for any single endpoint controls individual bandwidth usage
- Controls endpoint registrations for use of resources and helps control costs
- Multiple dialing policies automatically selects routes for best speed or lowest costs

Automatic ISDN DID and E.164 Provisioning

- Fast deployment and easy management
- Users can print their DID video number on their business card

Diagnostic and Event Logging

- Identifies and monitors global, endpoint and call statistics for fast resolution and configuration

Call Detail Record

- Provides detailed information for billing and usage reports with CSV export capability

Performance Monitoring

- Defines and monitors bandwidth availability of video network across LAN/WAN

Rogue Endpoint Detection

- Greater control over video network usage and security

Redundant Server and Alternate Gatekeeper

- Provides high availability of your video network
- Increases reliability to ensure high call success

NAT Confidentiality

- Protects the network from outside intruders by concealing internal IP addresses
