

Polycom® MedLink™

Interactive telemedicine workstation

MedLink Interactive
Telemedicine
Workstation with
iPower™ shown here

Benefits

Mobile and lightweight – it can be moved where and when you need it

High quality – high resolution video and crisp clear audio (via wireless microphone), provide for natural interaction

Easy to use – peripheral equipment such as scopes and light sources can be easily connected

Secure – lockable consolidated storage keeps medical devices safe and secure

User friendly – display mounted on a radial arm, tilts in all directions for ease of positioning

Powerful – physicians and care givers delivering medical services have dramatically increased access to specialists

Flexible – ideal for chronic and acute medical care

Whether collaborating, diagnosing or discussing medical advice with a patient, health professionals find that the MedLink cart helps make remote sessions more productive and natural.

More productive

Sharing medical records, x-rays, presentations and other content can be very difficult and frustrating for medical professionals working remotely. With Polycom's MedLink workstation, however, health professionals are more productive and better able to enhance the overall level of patient care. All types of technical content to be shared can be viewed while keeping eye-to-eye contact with the patient or other medical professionals. Expressly designed to be a powerful collaboration unit, the Polycom MedLink cart provides the best means for people interaction and content sharing.

Designed for the medical community

MedLink enables specialists who are remotely located to meet face-to-face with patients, physicians, nurse practitioners and other medical professionals. Collectively, they can interview patients, conduct physical examinations, review records and tests or consult on diagnosis and treatment protocols. With Medlink, specialized expertise is delivered to the patient without the need to move the patient to the specialist.

MedLink can also be used in quick emergency room diagnosis, remote observation of patients in isolated, high-risk areas or secure locations, and to deliver educational presentations to medical students. Its flexible design provides connections for any medical peripheral that has a composite video or XGA resolution output, as well as stethoscopes, transtelephonic ECG/EKG devices, x-ray film digitizers and vital signs monitors. The unit is mobile and can be moved easily from location to location. The flat panel display is located on a flexible radial arm allowing the medical professional to easily maneuver it into the best position.

Solutions

Polycom's MedLink Interactive Telemedicine Workstation is a state-of-the-art solution meeting the demands and unique requirements of the healthcare industry.

Connect. Any Way You Want.
